

FIRESIDE CHAT

SERIES

Dr. David C. Anastasiu is an Assistant Professor in the Department of Computer Engineering at SJSU. His research interests fall broadly at the intersection of data mining, high performance computing, information retrieval, and cloud and distributed computing. Much of his work has been focused on scalable and efficient methods for analyzing sparse data. He has developed serial and parallel methods for identifying near neighbors, methods for characterizing how user behavior changes over time, and methods for personalized and collaborative presentation of Web search results.
